Setting up a Static IP address on your Android Smartphone might be the solution to your problem. Follow these step-by-step instructions to set the static IP address on your Android phone:

1. Go to Settings > Wireless & Networks.

2. Tap on the Settings menu to access the advanced options.

3. Under WiFi settings, select Use static IP.

4. Copy the current IP address, which is a few lines above.

5. Change the IP address except the last number. For example, if your phone's IP address is 192.168.2.130, then your router's IP address would be 192.168.2.1.

This tutorial shows you how to change the IP address of your Android mobile device. If you need to connect 5 devices (Android phones) to the same IP address at the same time, you can do so by following these steps.

Please note that depending on the version of Android, you can also set up a static IP address. You can use the device's "address reservation" feature, which allows you to associate a MAC address with a specific IP address on the local network. Setting up static IP addresses is easy, but make sure to follow the instructions carefully to avoid any issues.
